homework 20241103

陈皓阳 23307130004@m.fudan.edu.cn

第一题

1.
$$\triangle A \hat{\alpha} = \hat{\alpha} \hat{\chi} - A \hat{\alpha}$$

$$\triangle A = (\hat{\alpha} \hat{\chi} - A \hat{\alpha}) \frac{\hat{\alpha}^{T}}{\|\alpha\|_{2}} |\hat{\beta} = (\hat{\alpha} \hat{\chi} - A \hat{\alpha}) \frac{\hat{\alpha}^{T}}{\|\alpha\|_{2}} |\hat{\beta} = (\hat{\alpha} \hat{\chi} - A \hat{\alpha}) \hat{\alpha}^{T}|_{2} = (\hat{\alpha} \hat{\chi} - A \hat{\alpha}) |\alpha^{T}|_{2} = (\hat{\alpha} - A \hat{\alpha}) |\alpha^{T}|_{2$$

第二题

(2) 3/k dex [$11-D \neq 1$ do] | A B | = [$1A1|D-cA^{-1}B| \cdot A \mathcal{J}Z$ | $12D-2(2T) \neq 1$ | $12D-2(2T) = 0 \cdot l \neq 0 \cdot l$

第四题

代码文件 T4.py

第五题

代码文件 Jacobi.py

 50×50 全选主元 Jacobi 迭代 - 非对角线最大元素

 50×50 全选主元 Jacobi 迭代 - 非对角线元素平方和

 50×50 循环 Jacobi 迭代 - 非对角线元素平方和

 50×50 错误选旋转角 Jacobi 迭代 - 非对角线元素平方和

可以看到,如果每次选择旋转角都大于 $\pi/4$,则非对角线元素平方和不会收敛到零
